

Law and Order Automation

Abstract:

Law and order automation is a system which is developed to provide better interaction between public and police officers. This Java Project makes work easy for police officers by maintaining the information regarding their department.

Introduction:

Law and order automation is a Java Project that is developed to deliver the policies and law enforcement reporting tools to the next generation. This automation web project provides the setting for the intelligence platforms that agencies use to take incoming.

Public can get the permission to various licenses like Arms, loud speaker, Hotel/lodge, browsing center, mass meetings etc., by using this application. Officer will be able to approve /reject which will be notified to the applicant via sms and Mail.

Using this system public can get the permissions in easy way. All the required operations like bowering center, mass meeting, hotel/lodge details can be retrieved easily by using this application. The project law and order automation is a web project and it is a user friendly. This system stores all the information and stores all the details in the repository.

Objective:

The main objective of this law and order automation Java Project application is to provide a good communication between public and police officers. To provide the public permission in no time from anywhere or anytime.

Modules:

Administrator: This module is completely under the control of Administrator. He is having authority to view all the users, adding new police officers, deleting the police officers, adding new police stations, generating reports ,deleting the police stations and Appointing of police officers to a particular police station which is present in a specific zone or to a specific district.

Police Officers: Appointing the Police Officers to a particular police station which is present in a specific zone or to a specific district as a first time setup, Police officers will assignor tasks to detective ,The requests notified by the public are accepted or rejected by officers. Maintaining the criminal information state wise/area wise is mandatory.

Detectives: Detectives can access the cases or tasks assigned by the police officers, view cases or tasks assigned .Detective can view the cases list assigned by the officers. Detectives can also view the criminal information

Citizen: Secured registration of citizen is needed where they need to provide proof of citizenship, which will be cross checked by the police officers of that area. Citizens should be able to apply for various licenses like Arms, loud speaker, Hotel/lodge, browsing center, mass meetings etc.,
